Prepaid Access ATB

Cost-effective access system without the need for personnel

Allocation of access authorisation for specially defined times
The target group of our customers are visitors, residents, employees, long-term parkers or campers

PARKING

A PIN, QR/barcode or RFID tag is generated via a Pay Station or in the backend software, which gives you access to parking spaces, multi-storey car parks or underground car parks (e.g. Uni Campus).

ACCESS

You are granted access to buildings for the period you have selected or approved (hotels, offices, storage rooms). No personnel is required.

CAMPSITES

Optimal solution for campsites with little or no staff. When you purchase a camping ticket, you will receive a code/PIN for the entrance of e.g. a restricted area and access to sanitary facilities, etc.

Prepaid Access ATB

Pay Station

The parking time is entered and paid for at the Pay Station. With the ticket print a code is generated which is designed as a barcode or PIN. These codes allow access e.g. to buildings, sanitary facilities during the paid time or can be used as discount codes. The entries are deleted from the system after the parking time has expired.
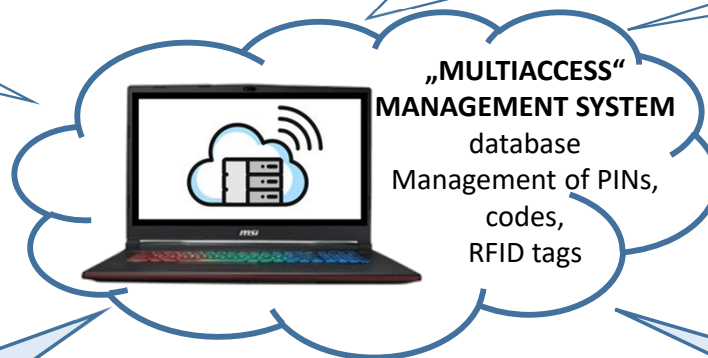

Parking Ticket

PIN 123456

QR-Code-Software „Multiaccess"

This software can be used to create QR codes for a limited period or until revocation, which can be printed on invitation letters or ID cards. The code can also be used with a mobile phone..

Mifare RFID cards or RFID tags can be used for long-term parkers, long-term visitors or for e. g. club members. Existing Mifare cards or tags can be integrated into the ATB system after a check.
